

Business Model Brief & Market Value Proposition

Colorectal Cancer Guideline Assistant - a multilingual RAG assistant grounded in trusted NICE guidelines.

Project	Colorectal Cancer Guideline Assistant
Scope	Colorectal cancer guidance and suspected cancer referral guidance from NICE.
Core Value	Fast, citation-backed answers from trusted medical guidelines instead of long manual PDF search.
Users	Patients, healthcare teams, medical students, clinics, and training centers.

Business Problem

Healthcare teams and patients often need quick access to reliable guideline information, but official clinical guidelines are long, complex, and difficult to search manually. This can slow decision support, reduce patient understanding, and push users toward unverified online sources.

Solution Overview

The system is a RAG-based clinical assistant that answers colorectal cancer questions using indexed NICE guideline content only. It retrieves relevant chunks, generates a concise answer, and attaches the supporting source so the answer is grounded rather than hallucinated.

Market Value Proposition

The assistant converts long medical PDFs into a searchable conversation experience. Users can ask in Arabic or English and receive a short, evidence-based answer with citation. This improves accessibility, saves time, and makes guideline knowledge easier to use.

Key Benefits

- Faster access to trusted colorectal cancer guideline information.
- Reduced hallucination risk through retrieval-grounded generation.
- Arabic and English support for wider accessibility.
- Citation-backed answers that show where the information came from.
- Expandable architecture for other cancer types or medical specialties.

Possible Business Model

Model	Description	Target Buyer
B2B Clinics	Internal guideline assistant for doctors, nurses, and care teams.	Clinics and hospitals

SaaS	Monthly subscription for institutions needing searchable guideline support.	Universities, training centers, clinics
White-label	Customized assistant for a hospital, specialty, or local guideline set.	Healthcare organizations
Expansion	Add more diseases and guideline sources after colorectal cancer.	Broader medical market

Competitive Advantage

- Trusted source: NICE guidelines instead of open web answers.
- Transparent: answers include supporting evidence and citation.
- Multilingual: supports Arabic and English questions.
- Practical: lightweight RAG pipeline that can be deployed as a web assistant.

Limitations and Risk Control

The assistant is for information and education only. It does not replace doctors, diagnosis, emergency care, or clinical judgment. If a question is outside the indexed guideline scope, the system should refuse or ask the user to consult a clinician.

One-line Pitch

A multilingual RAG assistant that turns trusted colorectal cancer guidelines into fast, grounded, citation-backed answers for patients and healthcare teams.
